

Article Markup Project – Jan 30, 2016

Format the Aboriginal Australians document using HTML!

Utilize:

- Headings
- Ordered List
- Unordered List
- Blockquotes when appropriate

Extra Challenges:

- Linking the “contents” section to the correct section titles
- Appropriate Italics referencing written works
- Coding the “—” longer hyphen

The solution is included in case you need it!

Don't forget to set up your HTML document appropriately!

If you like this, I will work on getting a “part 2” where you add the CSS components after class tomorrow.
